

Fonts

In iReport you can use all the system fonts you want, but to maximize the portability of the documents we suggest to use TTF Fonts installed using Tools > Options > iReport > Fonts. In this way fonts can be exported as font extensions for JasperReports and deployed as jar in any application.

JasperReports provides a built-in font extension for the DejaVu fonts (Sans, Serif and Mono) which work well with all the character sets and are correctly displayed in PDF documents as well.
